(1) In North America, 120 VAC systems are required to have a 20% de-rating from the service or outlet rating on the system rating labels for current. Therefore, systems designed for use with 120 VAC @ 15 A service are labeled as 12 A, and systems designed for use with 120 VAC @ 20 A service are labeled as 16 A.

(2) Active Cooling systems are not available at 100 or 110 VAC. These require a 115-127 or 200-240 VAC electrical supply.

(3) 127 VAC tolerance -10% to +5%
