Datasheet

Polydoros RF Series

Generators for radiography and fluoroscopy systems

Answers for life.
Polydoros RF X-ray Generators

Siemens offers generators in the 30 to 100 kW output range, suitable for almost all medical X-ray applications. We can also supply generators for special applications like computed tomography, mammography and mobile C-arms. We are experienced in designing or manufacturing monoblocks to cover virtually all X-ray imaging requirements. Available features include Automatic Exposure Control (AEC), high speed starter, conventional or pulsed fluoroscopy for dose reduction and tube load computing.

**General**
The Polydoros RF X-ray generators are the standard for a wide range of radiography and fluoroscopy systems.

The modular design of the RF family incorporates high versatility and excellent adaptation to all requirements of radiography and fluoroscopy applications. The generators for standard X-ray tube assemblies are available with a nominal power from 30 kW to 80 kW.

The generator can be controlled via several interfaces (Ethernet, Can, RS 422, Parallel). The integrated processor system provides excellent accuracy and reproducibility of the radiographic data by performing all control and regulating functions.

Two control consoles are available: one with membrane keys and one with touch panel operation. For fluoroscopic applications only touch panel operation is provided. For DR application a Mini Console is available, which provides on/off and exposure release functionality. To optimize the service life of the tube, the required cooling interval is shown after each exposure.

**Option:** A tube load computer determines the exact thermal condition of the tube. Tube load in HU’s and required cooling time are displayed (part of the plus package).

**Special features**
- High frequency technology
- Highly accurate radiographic parameters
- Precise reproducibility
- Fast regulation of high voltage and tube current
- Short exposure times
- Minimal space requirements
- 32-bit microprocessor
- Digital display of all selected data
- User friendly operation
- Integrated service functions for ease of service

**Customizing**
In order to fulfill your particular requirements, we also provide you with customized versions of this product.

**Options**

- In combination with the Standard Control Console: Organ/anatomic programs incl. control console (4 x 24 programs)
- Line matching transformer for 3-Ph-440 V/480 V (only for Polydoros RF available)
- External manual exposure switch
- Wall mount for control console
- Parallel interface
- Tube load computer

**Accessories**

- X-ray tube assembly
- Multi-leaf collimator
- High voltage cables

**Control Consoles**

The RF generators are prepared for the connection of different control consoles.

**Organ/anatomic programming**

All radiographic parameters, e.g. the kV and mAs value, can be stored in the organ programs and selected at the touch of a button. The preset organ programs are easily modified by the user. For special cases, any of the technique parameters can be changed when the organ program is selected.

For anatomic programming in combination with the Standard Control Console an add-on console is used. The program buttons can be labeled in the desired language by the user in a simple manner.

The Siemens Healthcare Business Unit Components & Vacuum Technology is ISO 9001 and ISO 13485 certified, manufactures in accordance with the Quality System Regulations (QSR) as defined by the U.S. Food and Drug Administration (FDA) and endeavors to comply with legal requirements concerning the environmental compatibility of its products. Siemens reserves the right to modify the design and specifications contained herein without prior notice. All rights reserved, particularly in connection with patent applications or registrations of utility model or design. This document is not considered to be a contractual specification. Kindly contact Siemens AG prior to using this information for equipment design.

These components and configurations are not finished medical devices. Compliance with all laws and regulations that are applicable to finished medical devices is the responsibility of the assembler/manufacturer of the finished medical device.

The information in this document contains general descriptions of the technical options available, which do not always have to be present in individual cases. The required features should therefore be specified in each individual case at the time of closing the contract.

The components are labeled as “Manufactured by Siemens”. However, the buyer shall not market the components using the “Siemens” brand name and/or trademark. The buyer may integrate these components into the medical system using its own brands and labels. The product names and/or brands referred to are the property of their respective trademark holders.
